

Besicomm Mobile – PDC

Perform the work order change where you are currently working. Select the order without printing it first. These are two of the many advantages that our mobile solution offers over classic hardware terminals.

Besicomm Mobile at a glance

- As HTML5 web app and native app for capturing of work orders on smartphones and tablets
- Works on Android, iOS and Windows (Web App only) based devices
- Compatible with existing hardware terminals
- Customer-specific configurable
- Camera integration as barcode scanner (depending on device)
- Suitable as frontend for the following SAP modules / interfaces: HR-PDC (presence time, cost centers and internal orders), PP-PDC (production orders), KKx (maintenance, service and projects), CATS (service recording), CO direct and customer-specific interfaces

There are two supported recording methods:

1. Entry of time totals -> x-hours are posted to order xyz.
2. Confirmation of events -> at time x the system switches to order xyz

Besicomm Mobile recording of time totals (timesheet)

With this variant, the order times are usually recorded subsequently. The order can be easily searched and selected. If desired, the presence time of the hardware terminals can be used as the frame time. Conversely, it is also possible to generate the "In" and "Out" events additionally from the recorded data.

Example of an an entry mask:

Example of a posting overview:

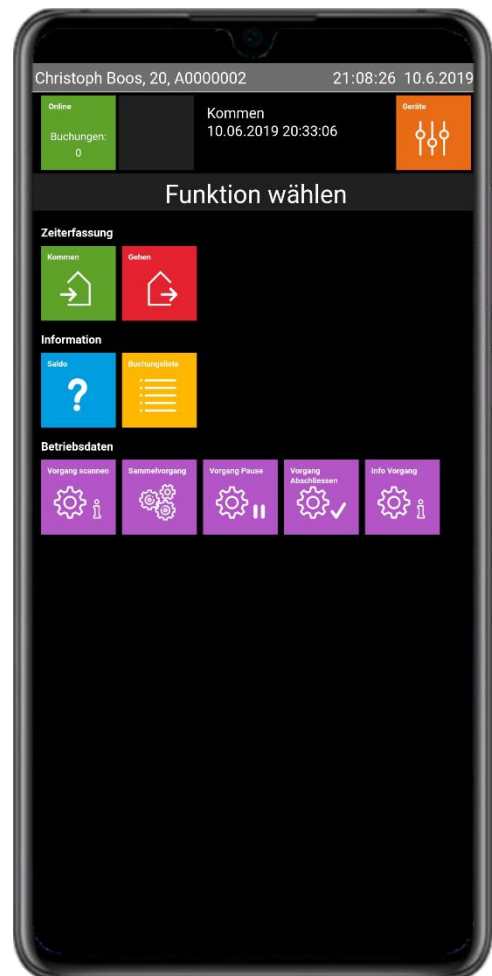

MATERIALKURZTEXT	AUFNR	VORNr	BEGUZ	ENDUZ	WERKZEUGE
Portalmodul PMP-compact 02	94004406	0010	07:00:00	10:00:00	X
Sitzung intern	99000049	0030	10:00:00	12:00:00	X
Hohlsäule d45/35x100-999	93065319	0010	13:00:00	15:15:00	X
Anschlag PDZ-160	93070170	0030	15:15:00	16:25:00	X

Besicomm Mobile event reporting

With this variant, when the work order changes from A to B, the user will confirm the change in the same time with Besicomm Mobile PDC.

Available functions with Besicomm Mobile PDC

- Order change with optional indication of good quantity, scrap quantity and finish message
- Collective posting of multiple orders
- Change of work center and activity type (Springer posting)
- Display order status information
- Scanning barcodes with the camera
- Automatic interruption and restart by In / Out time bookings
- Presence status dependent display

Example: Collective posting

Auftrag	Vorgang	Gutmeng	Ausschuss	Abs
2246543	0040	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>
2257728	0090	1 <input type="text"/>	<input type="text"/>	<input type="checkbox"/>
2246057	0040	<input type="text"/>	<input type="text"/>	<input checked="" type="checkbox"/>
