

Besicomm Terminal App Subsequent Posting

The Besicomm App Subsequent Posting works not only on smartphones and tablets but also on the current Android-based dormakaba terminals. All Besicomm Mobile App configurations are automatically available on the dormakaba terminals. One of these is the subsequent posting, which now enables the function that is missing in the HR clients of the dormakaba terminals. Depending on the authorization, the employee can select the date, booking type and time, so that he can independently update forgotten bookings at the terminal. Subsequent postings can be traced in SAP using the unique terminal ID. No workflow is supported in this simple variant.

Selection of date and posting type:

| Boos Christoph | | 13 50 00 20.3.2018 | |
