

## Wireless access control

The new wireless function connects dormakaba's online and standalone worlds by networking the digital access components via radio.

Wire-free access components can be conveniently controlled and serviced from your own desk, without the need for on-site programming. You have full access to the door components from your computer.

### Features:

- High level of user convenience, programming from your own desk
- Improved security for isolated doors: immediate transmission means no security gaps (e.g. revoke access rights if badges are lost)
- Option to extend all Kaba access solutions securely and cost-effectively with the wireless function
- High-quality door components with an award-winning design meet aesthetic requirements
- Perform updates and maintenance quickly and efficiently
- Reduced administration and labour
- Automatic alarm if a door is forced open (in online systems)
- Traceability – display of your 'door events' (time/location/medium)
